Description: The Dralhti is a heavy starfighter designed and sold by Galactech for the military market, but

so far has only been adopted by very few planetary governments. The Dralhti is extremely tough, and has strong weaponry, but is not overly fast or maneuverable, making it very much a target to be pounded by enemy fire. Its remarkably tough hull and powerful shields do make it hard to destroy, but many pilots prefer to rely on their own skill rather than the thickness of their hull to survive, so sales have remained low even in the mercenary and pirate markets. The size of the Dralhti does make it somewhat intimidating compared to other fighters, and its wings do allow unpowered atmospheric landings possible, but these are only minor selling points compared to the disadvantages of this design.
