Description: The Tie Lambda was a design from Sienar to cut costs, yet provide a vessel of similar quality to the standard Tie Fighter. With a single wing, and shield generators, it is a maneuverable and tough variant of the Tie, but the design is reported to be a little uncontrollable within an atmosphere. The vessel was only built in limited numbers, and never adopted by any noteworthy squadrons, because it offered little advantage over the standard Tie, and offered only small savings as well. The few produced have been stationed on research bases, where the non-standard parts required have no great drain on supplies, and where modifications to this unusual fighter can be continued hopefully leading to something

of worth for the Empire.
