Capsule: The GPS-CAv.1 consists of nozzles that must be placed around the torso of the armor being used, and connected to the gas cannister. This system creates a cloud of gas which lasts for 2 turns, unless there is a heavy wind, after which time it dissipates harmlessly. These gases are absorbed through the skin, therefore a sealed envirofilter suit or a vacsuit is necessary to protect from their effects. It is strongly recommended that the user of the GPS wears such a suit. One problem with the GPS is that a nozzle clogged with dirt may cause the pressurized gas cannister to explode for 4D damage to the user, releasing the gas in a 3m radius. Lobic Arms is working on a vehicle-mounted version of this system.
