Description: Whether in Robotech, Macross or even the Star Wars Universe, the Gnerl was the standard starfighter type vehicle of the Zentraedi fleets, filling a roll the Battle Pods couldn't due to lack of speed and flight capability, and succeeding much in the same manner as the TIE fighter of the Star Wars Galactic Empire; simple (by Robotech Master's standards), easy to mass produce, and devastating in large enough waves against an enemy target. The Gnerl can enter and exit an atmosphere on its own, carries an impressive enough weapons loadout (compared to anything in Star Wars), and with the advanced technology of the Zentraedi and Robotech Masters, it seems like little more than a cockpit with engines on the back of it, with just enough space for the Zentraedi pilot inside. But make no mistake, just like the TIE fighters, these fighters can be deadly in the right hands, or when thrown in large numbers against would-be aces!
