

Starships D20 / Altarren Athena Corvette

Altarren Athena Corvette

The Athena corvettes were the last capital scale spacecraft developed by Altarren Fleet Systems. Like the rest of Altarren's designs, the Athena only saw construction and deployment within the Minar sector located in the Mid Rim territories.

The Athena was to serve a more specific role than the Ares starships in the Altarren Navy. Satisfied with the number of Ares starships constructed over the past seventy years (only four other Ares were constructed after the Athena's debut), they turned to create a faster vessel oriented more to space combat than planetary assault.

The Athena featured an improved stardrive system which was supplemented by improved lateral thrusters. The Class Four hyperdrive, which was standard on the Ares, was replaced by a Class 3.8 on the Athena class vessels.

The Athenas filled their intended role as a heavy escort and patrol vessel well. With a fleet full of their own Ares and Athena class vessels combined with a variety of smaller craft purchased from outside sources, the Altarens believed they would be well-defended against any attack - the Empire would later prove them wrong.
