Description: The Tie Cluster is a small single person transport and inspection craft, used by imperial officers for external examinations of capital ships, either during repairs, inspections or construction. The Cluster used the command pod of the standard Tie Fighter, but downgraded the weaponry, and added shields, partially to protect the crew inside from enemies, but mainly to help protect them in case of radiation leaks and the like. A hyperdrive was added to allow the vessel to be used for long range travel, and courier work. The ships wings are folded behind the vessel, and although this gives a much lower energy output which accounts for the lower speed available to the pilot.
