

Equipment D20 / Akira Wolf-5 Body Arm

Akira Wolf-5 Body Armour

The Wolf-4 was rumored to have been pursuing a dedicated Commando vector while the mark V was being designed simultaneously. The Wolf-4 was rumored to have been testing cutting edge stealth technology, but the project bottomed out and the model was scrapped. The Wolf-5 was instead focused more on tactical combat application. The same basic design concept was used but a more reliable plastoid type material was used and no joints were left exposed. Instead special servomotors were added which amplify the wearer's every movement. A negative feedback system was used so that every move the wearer makes is mirrored by the suit they wear. However it takes a great deal of practice to get used to the augmented strength and speed of the armour. the same multi-frequency imaging system is employed on the mark V but another new feature was added. A small device monitors the wearer's vital signs and when they are seriously injured applies a one use sort of 'auto-medpac' which can stabilise the wearer until real medical help arrives. This new addition is considered to be a stroke of genius on the part of Akira.

Model: Akira Armour Co Wolf mark V Bodyarmour

Type: Medium (Tactical Combat Armour)

Cost: 5,300 credits

DR: 5

Max Dex Bonus: +4

Armor Check Penalty: 0

Speed: 11 (10 m), 7 (6 m)

Weight: 15 kg
