

GTM-11 Infyrno

The GTM-11 Infyrno is an area-effect bomber suppression weapon, often employed to knock out incoming waves of slow-moving bombers. Upon detonation, the Infyrno releases multiple submunitions that contain ultra-high-explosive charges. The Infyrno is detonated remotely by pressing the Secondary weapon trigger a second time. A HUD indicator displays the distance from the warhead to the firing ship. If the pilot triggers the detonation too early, he risks being caught in the Infyrno's extensive blast radius.
