

Type: Kamino Engineering KE-8 Enforcer ship

Scale: Starfighter

Length: 4 meters

Height: 13 meters

Cost: 80,000 credits

Skill: Repulsorlift Operation, KE-8 Enforcer

Crew: 1

Cargo: 2 Tonnes

Cover: Full

Maneuverability: 1D

Move: 30, 10 kmh

Altitude Range: Ground-200 Meters

Body Strength: 3D

Equipped With:

Manipulator arms

Weapons:

Electroshock stun device

Fire Arc: Front

Fire Control: 1D

Space: 1/2/3

Atmosphere Range: 50-100/200/300m

Damage: 5D (stun)

Description: The KE-8 Enforcer was a repulsorlift patrol craft used by the Kaminoan cloners to monitor the cloning facilities on Kamino.

Characteristics

The KE-8 was a single-being craft, measuring thirteen meters in height and four meters across. While capable of space flight and technically designated as a starfighter, the KE-8 was commonly relegated to planetary operations, and was fitted with no offensive weapons.

History

To keep clones in line and detect aberrants, the KE-8 was armed with a sophisticated sensor suite and an electroshock stun device. It also had a pair of manipulator arms that could be used to move materials many times the vessel's weight, although those generally required a co-pilot to operate. The KE-8 had fine repulsor control, and could hover in place for extended periods of time.

KE-8 Enforcers were used for isolating clones straying from the process and for finding new and better ways to deal with them. Pilots were commonly specialists in the detection of genetic mutations and

aberrant development. KE-8s were also used at the opposite end of the spectrum, and would use their sensors to pick out promising warriors from clone trooper ranks. These individuals would then be recommended for advanced training, set to become cross-trained clone trooper commanders, clone commandos, or Advanced Recon Commandos.
