

Craft: All Terrain Recon Transport

Type: Republic All Terrain Recon Transport (AT-RT)

Scale: Walker

Length: 4.2 Meters long, 6.3 Meters Tall

Skill: Walker Operation; ATRT

Crew: 1

Cargo Capacity: 60 kilograms

Cover: 1/4

Maneuverability: 2D

Move: 35, 105 kmh

Body Strength: 2D+2

Weapons:

Medium Blaster Cannon

Fire Arc: Front

Scale: Speeder

Skill: Vehicle Blasters

Fire Control: 2D

Range: 50-300/500/1km

Damage: 6D

Description: The All Terrain Recon Transport is a light scout vehicle used by the Clone Troopers of the Old Republic. Designed as a heavier assault vehicle than the Aratech Speeder Bikes that the Clone Troopers used as their primary scout vehicle, the AT-RT is still fairly fast and mobile, but was used mainly for quick strikes behind enemy lines at supply convoys and resupply bases. AT-RT's were also used on planets which had magnetic fields which interfered with the use of repulsorlift engines, making speeder bikes useless. Along with the AT-XT (All Terrain eXperimental Transport) the AT-RT was eventually developed into the common Imperial All Terrain Scout Transport, however AT-RT's have remained in operation on some backwater worlds as a police vehicle especially on worlds where riding mounts is the most common form of transportation.

Page designed in Notepad, logo's done on Personal Paint on the Amiga.
