Creatures D6 / Kroa Bird (Small Avian)

Name: Kroa Bird
Classification: Avian
Skin color: Yellow
Feather color: Green, Purple, White
Eye color: Yellow
Distinctions: Four wings
Point of origin: Batuu

Dexterity: 3D
Perception: 2D
Strength: 1D

Special Abilities:

Bite: Kroa Birds are small inoffensive creatures, capable only of defending themselves with a small bite (Str damage).

Distracting: The beautiful plumage and flight characteristics of Kroa Birds are a distraction to most intelligent beings, requiring a Willpower (Easy) test on seeing one to not become distracted from their current task.

Move: 15 (flying)
Orneriness: 2D

Description: Kroa birds were a type of bird found exclusively on the planet Batuu in the Outer Rim of the galaxy. The birds had four, featherless, yellow wings and a featherless tail. Their feather colors were green on the top of their head, purple from their yellow eyes to their chest, and white down to their feet. Kroa birds also possessed a long, skinny bill and two antenna-like appendages on the top of their head. Sometime between 232 BBY and 230 BBY, Jedi Youngling Lys Solay and Astromech Gigi were on a mission to find a lost package, but got distracted by a kroa bird before they could find it. While the bird was flying with Gigi, Solay suspected the bird enjoyed the droid's company.
