

# Starships D20 / CloakShape II Fighter

## CloakShape II Fighter

After the relative success of their original CloakShape starfighter, Kuat Systems Engineering opted to release a newer and more updated version of the craft which boasted all of the extras which did not come stock on the original design. These additional features included an advanced Class Three hyperdrive motivator with a slot for an R1 astromech, a maneuvering tail fin and a pair of fire-linked concussion missile launchers (added only on the fighters sold to legitimate militia forces). All of these additions would cost an owner of an original mark one CloakShape nearly 30,000 credits plus labor expenses - the mark two CloakShape included them as stock options for only 25,000 credits more than the stock mark one.

The original CloakShape fighters were designed for atmospheric and short-range combat because their power plants aren't strong enough for prolonged missions in space. However, the mark two CloakShape fighters were equipped with an improved power plant which adequately powered the craft for such missions.

Like many older starfighters of its era, the CloakShape traded speed for durability: in an era when starfighter designers are favoring firepower over a sturdy hull, the CloakShape promised to take a beating and bring the pilot home. The mark two CloakShapes were even more durable than the original with the addition of a small deflector shield generator. These updated CloakShapes were able to take more punishment than any other starfighter on the market at the time.

The original CloakShapes were built to be easily modified so the addition of modification kits sold by Kuat Systems Engineering would not prove to be much of a challenge even to amateur mechanics. However, this was not the case with the CloakShape II. The mark two fighters came with all of the modification kits installed in factory, so any modification to these existing systems often times proved to be more destructive than constructive. Damaged mark two fighters usually required much more detailed repairs due to close proximity of major flight systems with each other - a well-placed hit could render a CloakShape II completely inoperable.

The CloakShape II didn't sell as well as Kuat had hoped and the fighter was taken off of the market only four years following its debut. It is interesting to note that the original CloakShape fighter was remained in production for

many years following the failure of its successor.

Craft: Kuat Systems Engineering's CloakShape II Fighter

Class: Starfighter

Cost: 80,000 (new), 35,000 (used)

Size: Tiny (15 meters long)

Crew: 1 (Normal +2)

Passengers: None

Cargo Capacity: 20 kilograms

Consumables: 1 day

Hyperdrive: x3

Maximum Speed: Attack

Defense: 24 (+2 size, +12 armor)

Shield Points: 30

Hull Points: 140

DR: 5

Weapon: 2 Laser Cannons (fire-linked)

Fire Arc: Front

Attack Bonus: +8 (+2 size, +2 crew, +4 fire control)

Damage: 4d10x2

Range Modifiers: PB +0, S -2, M/L n/a

Weapon: 4 Concussion Missile Launchers (6 missiles)

Fire Arc: Front

Attack Bonus: +8 (+2 size, +2 crew, +4 fire control)

Damage: 7d10x2

Range Modifiers: PB +0, S/M/L n/a

Note: Concussion missile launchers were only installed on those fighters sold to legitimate militia forces. Those fighters purchased by private owners were not equipped with this weapon.
