

Starships D6 / RanCorp atmospheric Ra

Wasp Atmospheric Fighter

The wasp atmospheric fighters are sent primarily into radzone ground battles where air support is needed (though some planets use wasps for patrol duty). The Craft is like a fixed wing version of the b-wing except the top two wings are level with the cockpit and slop down to drop the cannon tips at a level just below that of the cockpit. The craft also sports anti-tank missiles to deal with armored ground targets but these may be replaced by gemini air-to-air missiles. The craft's sleek aerodynamic design makes it perfect for atmospheric combat but it has no hyperdrive and can't make it out past orbit of a planet so must be moved around on carriers.
