Description: A notable vessel in the Republic Navy and many Sector defense forces, the Moderator Light Destroyer was commissioned around the time of the Naboo blockade. Its diverse array of weaponry combined with its sturdy hull, long range hyperdrive, and adequate starfighter complement has made it a consistently strong seller for KDY. If any complaints are to be made, it's that the Moderator tries to accomplish too much, and consequently its sensor and sublight systems are slightly underpowered. When the KDY subsidiary Rothana Heavy Engineering was charged with designing the primary military transport of the secret clone army for the Republic, their engineers used the basic blueprint of the Moderator to design the Acclamator.
