Z-95/4 Guillotine

The Guillotine was TaggeCo's entry into the Headhunter aftermarket modification business. They basically remanufactured the ship from the frame up, fitting a chambered delta wing and canards (to improve atmospheric maneuverability), improved thrust vectoring (to improve space maneuverability) and their Quad-Pack Proton Torpedo projector, giving the diminutive fighter the punch of two Y-Wing assault bombers. The Guillotine was hampered by its low proton torpedo payload (only 8, enough for two full salvos), its slow speed compared to the original Headhunter, and its low-powered laser cannon. Though intended as a ground attack fighter, it found its most wide use as a cheap space defense fighter for small frontier worlds, becoming a cheap alternative to (of all things) the Skipray blastboat.
