Note: The Earth Alliance has yet to perfect artificial gravity technology and the crew is subjected to a zero gravity enviroment throughout most of the ship (including the command areas). However, the crew quarters are located in a rotating section of the ship that creates gravity through centripical force.

The Earth Alliance Omega-class Destroyers are the most powerful ships in the current earth-force arsenal. They were the first new ship class to be designed and built after the disastrous Minbari war, and they incorporated a lot of new technology. The first Destroyer of the construction line was the "Agamemnon", captained by John Sheridan. Most of these ships have names based on greek history and mythology. These ships are about a kilometer long, and are equipped with beam weapons, other heavy weapons, and interceptors. Like most capital ships, they are not very manuevarble. There is no artificial gravity on board any Earth Alliance ship, including these ones. Instead the middle part of a Destroyer rotates to create gravity for the crew. They also carry a mixed complement of Starfuries, most of them being the new Thunderbolts. The Omega-class Destroyers are of course equipped with jump-point generators. The Earth Alliance has since the war produced almost 200 of these powerful ships in an effort to improve Earth's defense against alien races.
