Description: The MC30 line of frigates served the Mon Calamari and Alliance fleets admirably in the peak years of the Galactic Civil War. While the majority of the Calamari cruisers formed the backbone of the Rebel Navy, frigates and other smaller vessels constructed at the Mon Cal Shipyards were more evenly divided between serving the cause of the Alliance and protecting Dac from Imperial retaliation.

Soon after the Mon Calamari threw off the shackles of Imperial subjugation, older warship designs were looked at for possible production to defend Dac from future assault. A design team analyzed the original plans for the Recusant-class destroyer, stolen by Quarren Separatist sympathizers and used extensively by the Commerce Guild and Confederacy. With a wealth of battle data on the design, many of its flaws were addressed and the MC30 frigate was born.

The MC30b variant was the principle interdiction vessel of the Calamari Navy. Built with a forward pulse mass generator tube, MC30b was designed to use its speed and maneuverability to spread an interdiction field across the combat zone once the enemy was engaged. The addition of the interdiction technology did significantly reduce the frigate’s firepower, so the MC30b usually drops back to a support role in the combat group once its pulse mass generators are deployed.
