Description: The GVG Anuket was originally designed for resource extraction in the volatile environment of gas giants. More recently, the Anuket has been modified for nebular operations. The Anuket has the most sophisticated sensor array available, enabling it to navigate the intense EM maelstroms of supernova remnants. In the nebula, the Anuket plays two important roles. First, the miner collects samples for scientific analysis and serves as a laboratory for field experiments. Second, the Anuket gathers deuterium-rich gas for use in the fusion drives that power the allied

fleet.
