DESCRIPTION:

???The M12G1 Light Anti-Armor Vehicle, abbreviated as the M12G1 LAAV and commonly known

as the Gauss 'Hog, is a United Nations Space Command ground vehicle. The Gauss 'Hog is a variant of the M12 Force Application Vehicle and features a mounted M68 ALIM Gauss Cannon.

???The M12G1 LAAV is one of UNSC's anti-armor vehicles, designed to quickly and efficiently defeat lightly armored vehicles such as Type-25 RAV "Chopper" and Type-32 RAV "Ghost", while also being a threat to Type-26 Assault Gun Carriage "Wraiths". The Gauss 'Hog is almost exactly the same in every detail to the standard M12 "Warthog" FAV except that it is equipped with a mounted M68 Gauss Cannon which fires 25mm hypersonic speed projectiles by asynchronous magnetic acceleration in the base of the cannon. It takes about a half a second to recharge between cannon shots. Although it appears more rarely than the standard Warthog, its capabilities make it a fearsome, agile and powerful vehicle to use.
