Droids D6 / SoroSuub Corporation FA-4 serie

Name: SoroSuub Corporation FA-4 series Pilot droid
DEXTERITY 2D
KNOWLEDGE 1D
MECHANICAL 3D
- Astrogation 4D
- Capital ship piloting 4D
- Space Transports 5D
- Starfighter Piloting 4D
- Repulsorlift ops 4D
- Sensors 3D
- (Water vehicle ops 5D)

PERCEPTION 2D
- Search 3D+2

STRENGTH 2D+2
TECHNICAL 1D

Equipped With:
- Human-range visual sensors
- Humanoid body (2 arms, head)
- Tracked Lower Body (+1D vs rough terrain)
- Vocabulator (monotone)
- Tight-band comlink

Move: 8
Size: 2.1 meters

Description: FA-4 pilot droids were a model of pilot droid used during the era of the Galactic Republic.

The FA-4 was a pilot droid model with a thin, spindly frame mounted on a wheeled unit. They had ball heads, and at over two meters in height were tall enough to pilot many starships, including Punworcca 116-class interstellar sloops.

FA-4 droids were utilized in the last decades of the Galactic Republic, and during the Clone Wars. The Sith Lord Count Dooku, head of the Confederacy of Independent Systems, owned an FA-4 which he used onboard his Punworcca 116-class interstellar sloop solar sailer. The droid piloted the Sith from the planet Geonosis to the planet Coruscant after the Separatists' defeat during the Battle of Geonosis. FA-4 units also worked on Coruscant itself, and around the time of the Battle of Coruscant, these droids bustled around the Senate Building and the Senate Office Building.
