Vehicles D6 / Incom Corporation T-16 skyhop

Name: Incom Corporation T-16 skyhopper
Type: Air Speeder
Scale: Speeder
Length: 5.2 meters
Height: 10.4 meters
Skill: Repulsorlift operation: T-16 skyhopper
Crew: 1
Passengers: 1
Cargo Capacity: 50kg
Cover: Full
Altitude Range: Ground level-300km
Cost: New: 14,500 credits; Used: 6,500 credits
Maneuverability: 2D
Move: 410; 1200kmh
Body Strength: 4D
Weapons:
- Pneumatic cannons
  - Fire Arc: Front
  - Skill: Vehicle Blasters
  - Fire Control: 1D+1
  - Range: 5-50/150/500m
  - Damage: 4D+2

or

- Heavy laser cannon (1)
  - Fire Arc: Front
  - Skill: Vehicle Blasters
  - Fire Control: 2D
  - Range: 5-150/450/1.5km
  - Damage: 3D+2

Description: The T-16 skyhopper was a high-performance airspeeder.

The Incom Corporation T-16 Skyhopper was equipped with an ion drive and a fully pressurized cockpit, allowing it to operate at trans-orbital altitudes.

Civilian versions of the skyhopper were armed with pneumatic cannons, and were equipped with targeting lasers though many law-enforcement agencies and planetary militaries throughout the galaxy utilized modified T-16s due to their overall good performance. However, because it was armed with only a single mounted repeating blaster, it was often overlooked by the military.

Even so, these airspeeders were often used as training vehicles by the Rebel Alliance, due to the fact that their flight controls were similar to those of X-wings.

The skyhopper was a common sight across the galaxy, with versions of the craft found on nearly

every settled world. The T-16 was identified by its tri-wing design and triangular cabin. The three wings, which were reproduced in countless Imperial transports, provided excellent stability. The central airfoil segmented the canopy and blocked much of the pilot's view, but computer displays and a holographic mapping system compensated for this decreased field of view.

The speeder had a top speed of approximately 1,200 kilometers per hour, and the two repulsor generators provided lift up to 300 meters. Many young pilots preferred skyhoppers over landspeeders because of the increased maneuverability.

Luke Skywalker owned a T-16 on his home planet of Tatooine, where he would use womp rats as target practice and race through Beggar's Canyon with his friend, Biggs Darklighter. After an incident where Skywalker "threaded the needle" during a dangerous run through Beggar's Canyon, the T-16 ended up undergoing repairs at the Lars Homestead, repairs that were ultimately not completed by the time of the battle between the Tantive IV and the Devastator.

Six months after the Battle of Yavin, two T-16s were flying through Beggar's Canyon when the Empire raided Mos Eisley.

The MT-16 was a T-16 modified by the New Republic with a blaster cannon for light combat.
