Description: This Imperial capital ship was a wedge-shaped vessel that served as a part of Admiral Giel's assembled fleet c. 3 ABY.

It was very similar in appearance to Giel's flagship, the Praetor II-class Star Battlecruiser Helmsman, but instead of a simple arrowhead hullform, it had a truncated bow with double-pronged protrusions either side of a recessed area.

Based on a comparison with other Imperial warships, like the Gladiator-class Star Destroyer or the Broadside-class cruiser, the torus-shaped section protruding from the stern either contained hangars, docking bays or missile batteries of some sort.

Similar to the Praetor Mark II-class battlecruiser, the ship possessed ring structures near the end of the ship's ridge.
