Planets D6 / Sinta Glacier

Name: Sinta Glacier
Region: Mid Rim
Suns: Sinta
Class: Asteroid
Primary terrain: Ice
Points of interest: Sinta Glacier Colony
Major exports: Malsarr

Description: Sinta Glacier was a massive chunk of ice, billions of years old, which had once been the core of a mega-comet, and was eventually caught in the orbit of the star Sinta. The Sinta Glacier Colony was a settlement on the ice chunk, extracting ice cores from the chunk that contained traces of malsarr.

Sinta Glacier Colony
The Sinta Glacier Colony was a settlement located on the Sinta Glacier, a massive chunk of ice orbiting the star Sinta. The Resistance operative Finn and his partner Poe Dameron underwent a mission to meet Boolio.
