Description: Astromechs are extremely useful and extremely common droids, seen almost everywhere across the galaxy, so even the extremely rich want to have one for their skills and capabilities. However Apreel Foulincius disliked the utilitarian look of owning one, thinking that keeping such an industrial device near him all the time reduced his status to just that of a mere commoner. So he had the most capable droidsmiths in the galaxy modify his astromech into the most stylish and appealing design they could.
R2-DC0 (Artoo Deco) was the result, enhanced in not only looks, but also to better help around its masters starship.
One problem was that the droid was programmed knowing its own value, and to avoid situations

where it might become damaged or lose that value, and therefore was a fairly cowardly and persnickety droid, which spent as much time polishing itself as it did doing its duties.
