Crew Skill: See Gasgano
Cargo Capacity: 5 kilograms
Cover: 3/4
Altitude Range: Ground - 50 meters
Maneuverability: 2D
Move: 274; 823 km/h
Body: 3D

Description: The Ord Pedrovia was the podracer model used and designed by professional podracer pilot Gasgano.

Characteristics
The vehicle boasted incredible acceleration, which came in handy, since Gasgano loathed to let anyone pass. This vehicle had a nice speed boost package, but after boosting, the pod ran very hot, and lacked a good cooling system to appease. This was also not a problem for Gasgano, as he only used the booster in critical situations.

History
In 1 BBY, an unidentified racer piloted a podracer that looked very similar to Ord Pedrovia, which may or may not be the same as the replica being acquired at a later point by an unidentified spacer.

Early in the Galactic Civil War, a spacer acquired a podracer that looked very similar to Ord Pedrovia. This podracer was believed to be a replica, and not the same vehicle piloted by Gasgano.
