

Starships D6 / SB-1 Firestorm-class Heavy Cruiser

Firestorm Cruiser

The SB-1 Firestorm class Heavy Cruiser is an anti-starfighter capital ship capable of holding its own against other capital ships. It looks like a cross between a small SSD and a Mon Calamari cruiser. Unlike traditional Star Destroyer designs, the Firestorm does not thin out towards the front, rather it has shield generators and backup generators housed there. A large tube runs along each side of the Firestorm, housing concussion missile factories, allowing the Firestorm to produce its own missiles for the 150 missile launchers. The 50 quad laser cannons work with the tractor beams in an automated system that uses the tractor beams to hold down enemy starfighters while the quad laser cannons automatically fire at the starfighter being held. Maneuvering jets placed on the sides of the tubes and on the top and bottom of the fore hull to allow quick rolls and maneuvers. The ship is rather sleek, the hull black in color. Using the most advanced miniturization and production technology, the factories are capable of producing 150 missiles in 4 minutes. This is possible by having 150 mini factories, each one producing a missile at the same time.

The forward bays hold enough materials for the construction of 3,000 missiles. The sheer speed of production is perhaps the most impressive thing about the SB-1. Each launcher may hold 2 missiles before requiring reloading. There is also no space aboard the Firestorm for missile storage other than in the launchers, so no pre-battle production is done unless the missiles are immediately transported off ship.
