Droids D6 / Phlac-Arphocc Automata Industri

Name: Phlac-Arphocc Automata Industries W-series droideka
Manufacturer: Phlac-Arphocc Automata Industries
Class: Battle droid
Height: 1.83 meters
Sensor color: Red

Dexterity: 2D
    Blaster 7D, Dodge 5D
Knowledge: 1D
Mechanical: 1D
Perception: 1D
Strength: 3D
Technical: 1D

Equipped with:
    Two twin built-in blaster cannons (Range 5-50/120/300, Damage 6D+2)
    Two visual and two auditory sensors - Infra Red Vision
    Sheild Generator (+2D, due to power drain can only be used for 3 rounds)
    Armoured Skin (+2D)
    Rolling Motive System (Move 15, requires shield to be deactivated)

Move: 7

Description: The W-series droideka was a model of droideka, and the successor of the P-series droideka. The droid's blaster arms were enlarged and a higher-yield blaster was used, which meant that they required more energy to operate. Due to this, the W-series rarely used their shield generators, which could be very energy-consuming. This was also their weakness: they were vulnerable to blasterfire like any other battle droid without their shields. Despite this setback, however, the W-series was nonetheless an efficient unit on the battlefield with their enlarged, rapid-fire blasters. They were most notably deployed at the Battle of Geonosis. They were succeeded later on in the Clone Wars by the Q-series droideka.
