Droids D6 / Cybot Galactica IW-37 Pincer Loa

Name: Cybot Galactica IW-37 Pincer Loader Droid
Manufacturer: Cybot Galactica
Model: IW-37
Class: Labor droid
Degree: Class 5
Plating color: Gray durasteel

Dexterity: 1D
Knowledge: 1D
Mechanical: 1D
Perception: 1D
Strength: 7D
    Lifting 10D, Stamina 8D
Technical: 1D

Equipped with:
    Humanoid Body (two arms, two legs)
    One visual and one auditory sensors - human range
    Binary vocabulator
    Pincer Arm (Str Damage)

Move: 8

Description: The IW-37 pincer loader droid was a model of class 5 labor droid produced by Cybot Galactica for the Galactic Republic during the Clone Wars. It was designed to deal with sensitive, potentially explosive loads, particularly live military ordnance. It worked in circumstances that required the brute strength and indestructibility of a binary loadlifter, but with a high degree of subtle accuracy when handling an object. The droids primary feature was a terrifying looking pincer arm that could operate with the most delicate touch.

The grasping arm, which was centrally positioned on the front of the droid's chassis, could reach into small compartments to load or retrieve missiles and ammunition canisters, or recover ordnance or fuel cells from a wreckage to make it safe. Should anything explode, the IW-37's blaster-resistant durasteel armor meant it could generally take the hit and keep working. The droids chassis had a rechargeable battery module on its back and also featured two large flat-footed legs. The Open Circle Fleet utilized IW-37 droids, with its emblem marked at the front.
