Equipment D6 / EPT-212 Droid Detector

Model: EPT-212 Droid Detector
Type: Computerized Sensor System
Scale: Character
Cost: 4,000
Availability: 2
Game Notes: Mounted at entry points to installations it emits an alert noise when a droid passes close by, it works automatically on all droid types but if a droid is attempting to avoid detection they must use sneak vs the Detectors search skill of 5D.

Description: The EPT-212 was a security device manufactured by Fabritech. The device scanned for frequencies specific to droid wireless systems and droid power cell oscillations.

Chalmun installed a refurbished EPT-212 in his Mos Eisley Cantina to discourage droids from entering the premises. At some point it was stolen by Dathcha, but soon returned by a local spacer.
