Equipment D6 / Data-tape

Name: Data-tape
Type: Portable computer storage
Skill: Computer programming/repair
Cost: 125-400
Availability: 1

Description: Data-tape, also spelled as datatape, or data tape, was a type of physical storage media for different kinds of data. The tape itself, a continuous narrow, flexible strip, was stored on reels inside a protective shell. Monomolecular-switching binary tapes like the ones used by the Galactic Empire on Scarif had a 512-million-exanode capacity.

History
The secret plans for the Galactic Empire's powerful planet-destroying Death Star weapon were stored on data-tapes. These tapes were stolen by members of the Rebel Alliance and spirited to Princess Leia Organa, who copied the data from them into the memory banks of the droid R2-D2 in order to deliver them to Jedi Master Obi-Wan Kenobi on Tatooine.
