Equipment D6 / CryonCorp EnhanceScan Ge

Model: CryonCorp EnhanceScan General-Purpose Scanner
Type: Portable scanning device
Skill: Sensors
Weight: 8 kg
Cost: 2,000
Availability: 2
Game Notes: Able to scan to a range of 1,500 meters (though more than 1 meter of rock or metal blocks it). It can detect movement, ?nd life forms and monitor comlink signals. Scanning for life forms or comm signals requires a Dif?cult sensors roll. Device gives a +1D bonus to search rolls.

Description: A CryonCorp product, the EnhanceScan general-purpose scanner was used by Rebel Alliance forces on Hoth during their initial sweep to look for life forms. Its sensors included a motion sensor, comm scanner, metal scanner, and life-form scanners, and the unit was small enough to be carried around the neck. The EnhanceScan could detect life forms 1,500 meters away, the comm scanner had an effective range of three kilometers, the motion sensor had a 500 meter range, but the metal scanner only had a maximum range of one hundred meters. The computer built into the scanner controlled all four sensors and displayed the data on a readout screen.

Components of the EnhanceScan general-purpose scanner included an antenna, motion sensor, metal scanner, comm scanner, power cells, data port, power indicator, and life-form scanner.
