Capital Starship repair 6D, Capital Starship Weapon Repair 6D, Computer Programming/Repair 5D, Security 7D, Starfighter Repair 5D, Space Transport Repair 4D

Equipped With:
- Three wheeled legs (one retractable)
- Retractable heavy grasper arm (lifting skill at 2D)
- Retractable fine worker arm
- Small electric welder (1D to 5D damage, 0.3 metre range)
- Small circular saw (4D damage, 0.3 metre range)
- Video display screen
- Holographic projector/recorder
- Fire extinguisher
- Acoustic signaller
- Intellex V computer system
- Can hold up to 5 hyperspace jumps in active memory

Force Sensitive: N
Force Points: 1
Dark Side Points: 0
Character Points: 4
Move: 5

Description: R3-A2 was an orange and white R3-series astromech droid. It was seen in the Rebel base during the Battle of Hoth in 3 ABY.

Like other R3 droids manufactured by Industrial Automaton, R3-A2 was designed for high tech work on military installations. The clear plastex dome showed off a newly-updated Intellex V computer system, which contained detailed statistics on thousands of military starships. R3-A2 could hold up to 5 hyperspace jumps in active memory, and could also coordinate piloting coordinates and approach angles during combat. His eye was a round kind unlike most R3 units. However, he can be used in the back of X-wing starfighters, plotting coordinates, and talking with the pilot.

R3-A2 can also speak almost as many languages as C-3PO.
