Equipment D6 / Plescinia Entertainments CS-

Model: Plescinia Entertainments CS-Mark 12 Holoprojector
Manufacturer: Plescinia Entertainments
Model: CS-Mark 12
Type: Holoprojector
Cost: 10,000 credits
Size: 2.8 meters diameter
Weight: 500 kg
Range: 2 meters
Availability: 2

Description: The CS-Mark 12 was a holoprojector unit produced by Plescinia Entertainments during the time of the Galactic Republic. This unit was commonly installed aboard Mon Calamari Star Cruisers when the vessels were modified for use in the starfleet of the Alliance to Restore the Republic.

Design
The CS-Mark 12 hologram projection system measured 2.8 meters in diameter, and was initially designed for public presentations, but during the Galactic Civil War was adapted for military applications. Data was received by the unit via standard storage devices or through direct feeds from droids or datapads. Operator's panels were set into the perimeter of the unit, which allowed users to control audio level, aspect ratio and playback settings, and provided the tools of a complete editing suite.

Rebel technicians used a CS-Mark 12 to plot out the projected plan of attack against the second Death Star prior to the Battle of Endor. The presentation, held aboard Home One in the Sullust system, displayed holographic representations of Endor and the Death Star, and simulated a successful attack run on the station.
