Characters D6 / R3-S1 {Threece} (Rebel Astro

Name: R3-S1 "Threece"
Manufacturer: Industrial Automaton
Product line: R-series
Model: R3-series astromech droid
Class: Astromech droid
Height: 1.09 meters
Gender: Feminine programming
Sensor color: Black
Plating color: Silver

DEXTERITY 1D
Dodge 4D
KNOWLEDGE 2D
MECHANICAL 2D
Astrogation 4D, Capital Starship Piloting 4D, Starfighter Piloting, 4D, Space Transports 3D
PERCEPTION 2D
Command; Droids 4D, Search 5D
STRENGTH 1D
TECHNICAL 3D
Capital starship repair 6D, Capital Starship Weapon Repair 6D, Computer Programming/Repair 5D, Machinery Repair 5D, Security 5D, Starfighter Repair 4D *
* Astromech droids, if acting in co-pilot capacity, may attempt starship repairs while in flight.
Equipped With:
Three wheeled legs (one retractable)
Retractable heavy grasper arm (lifting skill at 2D)
Retractable fine worker arm
Small electric welder (1D to 5D damage, 0.3 metre range)
Small circular saw (4D damage, 0.3 metre range)
Video display screen
Holographic projector/recorder
Fire extinguisher
Acoustic signaller

Move: 5

Description: R3-S1, nicknamed "Threece," was an R3-series astromech droid with feminine programming that served as part of the Alliance to Restore the Republic. By 0 BBY, she was recognized as chief of the astromech droid pool in the rebel headquarters on the moon Yavin 4, where she was responsible for the upkeep of the base's equipment rather than being assigned to a starfighter. R3-S1 was vain and argumentative, as well as inordinately proud of her overclocked Intellex V processor.
When the Alliance Fleet was scrambled to fight at the planet Scarif, R3-S1 flew with rebel pilot Barion Raner as Blue Four. Once in the Scarif system, they tried to pass through the planet's Shield Gate with the rest of Blue Squadron, but were not quick enough, forcing Raner to pull up

before crashing. They then aided the Alliance Fleet above the planet, some of which ultimately escaped with the plans to the Death Star superweapon.

Biography

Stationed on Yavin

The R3-series astromech droid designated R3-S1 and nicknamed "Threece" served the Alliance to Restore the Republic during the reign of the Galactic Empire. She was stationed at the headquarters of the Alliance's Massassi Group in the Great Temple on the moon Yavin 4. Instead of being assigned to a starfighter, she was employed in the upkeep of technology throughout the base, making sure it was up to date and in prime condition. R3-S1 eventually became recognized as the chief of the astromech pool there.

In the year 0 BBY, R3-S1 was present in a hangar of the temple after Alliance High Command met to discuss attacking the Empire's forces on the planet Scarif in order to obtain plans to the Death Star superweapon. The meeting ended with a decision not to launch an attack, but the recently recruited rebel Jyn Erso assembled a group of rebels willing to follow her to Scarif against the orders of Alliance Command. Erso and Captain Cassian Andor led the group through the hangar and past R3-S1 before boarding the stolen Zeta-class Heavy Cargo Shuttle SW-0608 and taking off to start the Battle of Scarif.

Battle of Scarif

When the Alliance Fleet was later scrambled from Yavin to aid the rebels on Scarif, R3-S1 was loaded into the astromech socket of the T-65B X-wing starfighter flown by Barion Raner, a pilot flying with Blue Squadron as Blue Four. Upon arriving in the Scarif system, Admiral Raddus directed Blue Squadron to provided cover for the rebel ground forces. In order to reach the surface, all of Blue Squadron raced to pass through the Shield Gate in the planetary shield around Scarif, but after Blue Leader Antoc Merrick made it through the gate began to close. Realizing that he did not have time to make it through the closing gate, Raner pulled up in time to prevent him and R3-S1 crashing into the gate and perishing, as Vangos Grek and another pilot did.

Raner and R3-S1 then joined the other members of Blue Squadron who had not made it through the gate in aiding the Alliance Fleet above Scarif. While chased by three TIE/ln space superiority starfighters, the pair managed to destroy one of the Imperial I-class Star Destroyer Persecutor's deflector shield generator domes, which allowed the Star Destroyer to later be disabled by Gold Squadron's ion bombs and used to destroy the Shield Gate. With the gate gone, the Death Star plans were then successfully transmitted from the surface and a portion of the fleet, including some of Blue Squadron, managed to escape from the Scarif system. However, Blue and Red Squadrons had lost nineteen pilots and crew during Scarif and an earlier mission to the planet Eadu and so few pilots were left that the Alliance was unsure if it could even field Blue Squadron when the Death Star attacked Yavin not long after.

Characteristics

R3-S1 had feminine programming and a black sensor. She was built with silver plating, apart from her plastex cranial dome, which was transparent with orange markings. The astromech was equipped with an overclocked Intellex V processor and a holoprojector built into her dome.

R3-S1 excelled at organization, which earned her recognition as head of the astromech pool. At some point she picked up a vain programming flutter that resulted in her not working well with others and being competitive to a fault. The droid was also argumentative and inordinately proud of her overclocked processor. Despite this, she was highly valued by the Alliance. R3-S1 stood 1.09 meters tall and, like all R-series astromechs, was manufactured by Industrial Automaton.
