Vehicles D6 / IG-12

Name: IG-12
Manufacturer: Anzellan Droidsmiths
Model: IG-series assassin droid
Type: Mech
Date created: c. 9 ABY
Date destroyed: c. 9 ABY (later rebuilt into IG-11)
Owners: Grogu
Color: Gray and bronze
Height: 2.19 meters

Dexterity: 4D
Brawling Parry 6D, Dodge 6D
Knowledge: 1D
Perception: 1D
Strength: 4D
Brawling 6D, Climbing/Jumping 6D
Mechanical: 1D
Technical: 1D

Equipped with:
Pilot station for humanoid under .4 meters in size (droid possesses no motivating intelligence of its own and is directed by it's pilot, although is capable of defending itself and fighting under direction of it's pilot).
Humanoid Body (two arms, two legs, head)
360 Degree visual sensors (+1D to Search) and two auditory sensors - human range
Basic Vocabulator speech system (says Yes or No only)
Armour Plating (+1D vs damage)

Move: 10

Description: IG-12 was a repurposed mech created by a crew of Anzellan droidsmiths from the parts of the assassin droid IG-11. After the droid sacrificed itself by self-destructing during the Clash on Nevarro, some of its remains were collected, including the droid's damaged memory circuit. IG memory circuits, which were not manufactured any more by the time of the New Republic, were very hard to find at that time, and IG-11 could not be fixed. However, the Anzellans restructured the droid into IG-12, a body which could be only manually operated, and reprogrammed it with "yes" and "no" responses. It was gifted by High Magistrate Greef Karga to Grogu, despite Din Djarin's reluctance, who thought Grogu was too young to operate heavy machinery. The mech was used by Grogu on the Mandalorians' mission to retake their homeworld of Mandalore. During a battle between the Mandalorians and Moff Gideon's forces, IG-12 was destroyed by Gideon's Praetorian Guards. After the battle, Djarin used IG-12's remains to rebuild IG-11.
