Creatures D6 / Karnis bird (Small Winged Cre

Name: Karnis bird
Classification: Bird
Skin color: Green, Orange and blue (wings)
Eye color: Black

Dexterity: 3D
Perception: 2D
Strength: 1D

Special Abilities:

Bite: Karnis Birds are small inoffensive creatures, capable only of defending themselves with a small bite (Str damage).

Flocking: Karnis Birds gather in small groups, keeping watch for one another and squawking to alert the flock of any threats, so each can make perception tests to detect any threats.

Move: 16 (flying)
Orneriness: 2D

Description: Karnis birds were a type of bird found on the planet Tenoo, as well as its big moon. The birds chittered, were green in color, had black eyes, and had a blue-and-orange pattern on their wings. In 232 BBY, Jedi younglings Kai Brightstar and Lys Solay passed by a Karnis bird as they rode speeders on a Tenoo river, though Solay did not notice it. Later, while practicing flying in a Jedi Vector starship on the big moon, Solay became distracted by a flock of the birds—she had never seen them in person prior to then. She would have crashed into a boulder had the pilot Nash Durango not warned her.
