Special Abilities

Horned Beak: Burrowberry Birds have a hardened beak used for plucking berries from trees or defending themselves when threatened, this does (Str +2D) when used in combat

Move: 14 (flying) 12 (walking)

Description: Burrowberry birds were a type of birds native to the forest planet Yamradi. In 232 BBY, the species was discovered by SF-R3, Kai Brightstar, Nubs, and Lys Solay after a burrowberry bird mistakenly took CAM for a berry. It was later named by Solay after their habits of burrowing and eating berries.
