STRENGTH 1D
TECHNICAL 1D

Equipped with:
- Hologram Recorder
- Transceiver with live output capability
- Repulsorlift (Ground level - 150 meters)

Move: 14

Description: The Roving Eye observation droid was a popular type of Holocam droid around 137 ABY – a recording device attached to a repulsor system. It was used by law enforcement agencies, corporations and even Dark Lord of the Sith Darth Krayt, who used the Roving Eye droids to monitor the training of his disciples in the Temple of the Sith.

Characteristics
It was designed to collect different kind of data, compile it, strip of any errors and transmit the polished packet of data to a secure location. Alternately it could be programmed to store the data for manual retrieval or deliver the data physically to a destined location. It could connect directly to a computer networks, security sensors and camera feeds and analyze the data for the information necessary.
