Description: The MB-C1 medium transport, also known as the Mobquet Medium Transport or

Mobquet Medium Cargo Hauler, was a transport ship produced by Mobquet Swoops and Speeders.

Characteristics
Although one of the slower transports, its slightly reinforced hull and extra space helped increase its popularity.

The ship consisted of three modular nodes, that could be modified to serve the need of the owner. The standard design included crew quarters, storage, defensive weapons in front node, speeder racks in the second node and computer units in the third node. It wasn't hard to install new weapons, increase the passenger capacity or modify the cargo space.

Common installed weapons were two fire-linked twin medium laser cannons (which were also retractable) and a concussion missile launcher that was dorsal mounted.

History
The ship was one the few Mobquet attempts to break into the starship market. Because of Tagge's connection with the Empire, the freighter was licensed as medium transport rather than a heavy cargo carrier.

At least one Mobquet medium transport was used to make up a Hidden Jedi Temple. A Mobquet medium transport was also the basis for the Starlight Intruder's design.
