Description: Darth Maladi, born Malincha, was a Force-sensitive Devaronian female who was taken by the Sith from her homeworld of Devaron following the death of her Jedi parent at the hands of Dark Lord of the Sith Darth Krayt. She was trained in the dark side and became a prominent Sith Lady in Krayt's One Sith Order. Maladi specialized in the ways of inquisition, torture, and mental manipulation, all skills which she implemented in her service as the head of Sith Intelligence and Assassination. She was also a talented scientist who experimented with ways to pervert science to serve the Sith cause. Maladi manufactured and dealt the narcotic ixetal cilona, and was also the mastermind behind the sabotaging of the Galactic Alliance-sponsored project to terraform the Jedi world of Ossus.

In 127 ABY, Maladi joined Moffs Morlish Veed and Nyna Calixte of the Fel Empire in the instigation of the Sith–Imperial War, which saw the near-destruction of the Galactic Alliance and the New Jedi Order—the major opponents of the Sith. When Krayt usurped the Imperial throne from Roan Fel in the aftermath, Darth Maladi served in the new empire as the head of Sith Intelligence and Assassination. Ten years later, Krayt ordered Darth Maladi to find and dispose of the former

Emperor Roan Fel, and to capture Cade Skywalker, the last remaining member of the Skywalker family. Though she failed at the former task, the Sith were able to capture Skywalker, whom Maladi tortured to find his limits. Skywalker eventually escaped, and Maladi was forced to work with Rav, a Feeorin pirate for whom Skywalker had once worked, to find the fugitive.

When she located Skywalker in the Deep Core on the planet Had Abbadon, Maladi traveled with Krayt and other members of the One Sith to meet with his supposed captor, an ancient Sith spirit that resided in the body of an Old Republic Jedi Master, Celeste Morne. The meeting turned out to be a trap planned by Skywalker, Morne, and several Imperial Knights, and battle ensued in which Maladi received serious injuries. Following the Sith defeat Maladi was retrieved by Darth Wyyrlok along with her brethren and taken to Coruscant to recover from her injuries.

Darth Maladi became increasingly more certain that Darth Krayt had not survived the battle on Had Abbadon as Darth Wyyrlok claimed. Developing her own plans, Maladi returned to Wayland, the planet where she originally created the Ossus sabotage, where she began to bioengineer a new means by which the next ruler of the One Sith would be able to ensure the loyalty of the masses. A meeting with Darth Nihl resulted in Maladi sending him to Korriban to discover the truth about Darth Krayt's demise. She then lured Cade Skywalker to her laboratory, and forced him to serve as her test subject for a new weapon, only for her experiment to result in utter calamity: he escaped, leaving Maladi's laboratory in shambles.

The Sith Lady later eventually regained consciousness on Bastion and in the custody of exiled Imperial forces where, feigning insanity, she offered the deposed Emperor Roan Fel her services in return for the head of Cade Skywalker, a petition which was rejected by Fel. However, when the combined forces of the exiled emperor and the Jedi were badly defeated in the ensuing attack on the latter's hidden Temple on Taivas, Maladi was again approached by Fel, who reconsidered and accepted her offer. She later presented him with the completed form of the Omega Red biotoxin, which was—unbeknownst to the former emperor—engineered to eradicate all non-Sith within the blast radius. Fel failed to unleash the weapon however, and Darth Krayt was subsequently slain by Cade Skywalker, at which time Darth Nihl assumed leadership as Dark Lord of the Sith. Following her escape from the custody of the Imperial Knights, Darth Maladi joined the remnant of the One Sith in hiding, waiting for the prime opportunity to infiltrate the society of the enemy and strike from the shadows.

Personality and traits

Personal traits

Loyalty

Darth Maladi, like most Sith in Darth Krayt's New Sith Order, knew complete obedience to her Master. She always completed his orders as asked, though she sometimes wondered about some of Krayt's decisions, such as why he wanted Cade Skywalker alive. Maladi often tortured individuals, and took pride when she was able to successfully extract information out of them, evidenced when she garnered information about Skywalker from Hosk Trey'lis. Maladi was often in control of sentients, and barked commands at Nyna Calixte and Trey'lis, much like her Master Krayt did himself.

Scheming and manipulation

As the head of Sith Intelligence and Assassination, Maladi was adept at manipulating individuals without using the Force. Along with Krayt, she instigated the Sith–Imperial War by manipulating Morlish Veed into an alliance with the Sith, convincing him that the Sith were going to seat him as Emperor, though Maladi instead put him in a position of servitude to Krayt. She funneled lies as a matter of course, and easily detected when falsehoods were perpetrated against her. Her skills of

manipulation were well known and enemies dubiously heeded what she presented as truth. Maladi was affronted by comparisons to fellow Sith scientist Vul Isen, whose poisons she denounced as inferior, and with whom she refused to collaborate.

Maladi loved to scheme the demise of others. She molded the perfect assassin in Darth Kruhl, who was ready to die in order to kill Roan Fel. When that failed, Maladi revealed that Kruhl had been part of a larger scheme to kill Roan Fel, and that she was planning to mold another to finally place the final killing stroke. However, her scheming sometimes blinded her, and she was so enamored with the intricacy of her plans that she almost lost sight of her Krayt-given goal—to eliminate Roan Fel. On one occasion, Krayt had to remind her to keep sight of her goal to kill Fel before she became too consumed with plotting. She was ruthless to this end, and did not suffer the failures of her subordinates gladly, evidenced when she executed Vikar Dorn for his blunder during the assassination attempt on Emperor Fel's life.

Maladi was also confident in the stability of the New Sith Order, believing that they were more successful than the older Sith, though Nyna Calixte believed that the present day Sith were like the Sith of old, and that that reminiscent quality was going to be the demise of Maladi and the rest of the Sith. She was cold, calculating, unafraid to commit unspeakable acts if that suited her agenda. She held complete control over her emotions, even her fears; the greatest of them being the loss of control over her scientific creations.

Physical charcteristics

While most females of her species had a good deal of fur that was naturally white, Maladi's hair was black and covered only her head, the result of genetics. Maladi's eyes were yellow in color.

Powers and abilities

Darth Maladi was a Sith trained from birth in the New Sith Order, and could use a lightsaber proficiently. Maladi displayed considerable dexterity when her lightsaber skills were called into action; while dueling, she focused on strong Force attacks supported by her blade work, making her twice as formidable in battle. This was evidenced when she engaged the Twi'lek Jedi Shado Vao in personal combat on Had Abaddon, and attacked him with Force lightning. Vao defended against the lightning with his own weapon, but it held him at bay, and neither Jedi nor Sith was able to gain an advantage. Maladi was confident in her detection skills and was complementary that Vao, Skywalker, and the Imperial Knights were able to completely conceal their Force presences even from her.

Maladi specialized in the ways of torture and assassination. Through relentless use of specialized torture droids, she was able to successfully extract the information about Cade Skywalker out of Hosk Trey'lis, a Jedi Master of the New Jedi Order. Maladi was a master of espionage, assassination and interrogation, extremely skilled in both Sith alchemy and Yuuzhan Vong bioengineering. She knew the Memory Walk technique, using it to attack Cade Skywalker's mind on Wayland. When he used the same dark technique to defeat her, she eventually recovered her wits and returned to her work after the defeat of the One Sith's Maine forces.

Maladi's skill with Force applications was also on par with her fellow Sith; she was proficient with Force lightning, having successfully attacked both Jariah Syn and Deliah Blue with it while torturing Cade Skywalker. Maladi also had a mastery over Sith alchemy, which when combined with her Vongsense was used to mutate Yuuzhan Vong coral seeds into fatal, painful sores on sentients and other manipulations of the extragalactic material. She used her abilities to sabotage the Ossus Project, which started the Sith–Imperial War, and created Omega Red, what she considered the perfected form of the extremely-lethal Alpha Red.

Equipment

Like other Sith, Darth Maladi possessed a red-bladed lightsaber, which she used while in combat on Had Abbadon. As with many of her contemporaries, Maladi wore all-black clothing.
