Starships D6 / Vessel (Loex Gyasis Starship)

Name: Vessel
Type: Transport
Scale: Starfighter
Length: 37.2 meters
Skill: Space Transports Piloting: Vessel
Crew: 3; Skeleton: 1/+10
Crew Skill: See Leox Gyasi, Geode and Affie Hollow
Passengers: 4
Cargo Capacity: 20 metric tons
Consumables: 4 months
Hyperdrive Multiplier: x1
Hyperdrive Backup: x10
Nav Computer: Yes
Maneuverability: 1D
Space: 6
Atmosphere: 300; 950 kmh
Hull: 3D
Shields: 2D
Sensors:
- Passive: 20/0D
- Scan: 40/1D
- Search: 80/2D
- Focus: 4/2D+2

Weapons:
- Laser Cannons
  - Fire Arc: Turret
  - Skill: Starship Gunnery
  - Fire Control: 2D
  - Space Range: 1-3/12/25
  - Atmosphere Range: 100-300/1.2/2.5 km
  - Damage: 4D

Description: The Vessel was a transport starship piloted by Leox Gyasi of the Byne Guild. It was crewed by the co-pilot Affie Hollow and the navigator Geode. During the High Republic Era, the Vessel was assigned to transport four Jedi to the Starlight Beacon after their primary transport became unavailable. While traveling in hyperspace, the Vessel became stranded in deep space after debris from the Great Hyperspace Disaster obstructed hyperspace lanes. Upon the Byne Guild's dissolution, Gyasi arranged for Hollow to be registered as the Vessel's owner with Galactic Republic authorities.

History

In 228 BBY, the Vessel was used to transport supplies to Oisin along with two Jedi, Eve Byre and Zaph Mora. When it arrived at Oisin, the crew started to land but nearly collided with a Nihil ship

that was carrying a raiding party. The ship was maneuvered twenty meters above the raiding ship so the Jedi could jump onto the ship below and breach the hull. It landed on the planet and was emptied of all its cargo. After unloaded, Hollow and her crew flew the Vessel back to Coruscant. The ship was used to transport Reath Silas and Cohmac Vitus to Tolis on a mission to discover if they could find any information about the Nameless and the blight. When they reached the planet and entered the atmosphere, the crew of the Vessel dropped off the two Jedi and then went to collect a sample of Tolisian ore. Once done, the crew flew the Vessel back into orbit to wait for the Jedi to request retrieval from the surface. Hollow detected a signal from a specialized comlink she had given to Byre was coming from the surface of Tolis and ordered the Vessel to land. As they broke orbit, the Vessel suffered a major failure in the fuel regulator. Geode managed to get it under control, but the ship had limited maneuverability. They headed to the surface when they received a call from Silas asking for extraction. The Vessel came in low with its rear hatch open but came under fire from Sicarus's shuttle, causing it to crash. The ship was unable to fly due to a broken power relay inverter but was repaired using a replacement that was removed from the Invictus. After it was repaired, the Vessel was used to transport everyone from Tolis to Coruscant.
